ART UNIT

PAPER NUMBER

2154

MAIL DATE

DELIVERY MODE

03/17/2008

PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No.	Applicant(s)	
	09/887,070	SORENSEN, LAUGE S.	
	Examiner	Art Unit	
	DUSTIN NGUYEN	2154	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 07 December 2007.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 3,4,6-9,11-16,18 and 20-28 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 3,4,6-9,11-16,18 and 20-28 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. Claims 3, 4, 6-9, 11-16, 18, 20-28 are presented for consideration.

Continued Examination Under 37 CFR 1.114

2. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12/07/07 has been entered.

Claim Objections

3. Claim 22 is objected to because of the following informalities: "the identifiers" should be corrected as "the set of associated identifiers". Appropriate correction is required.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 3, 4, 6, 7, 11-16, 18, 20-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lindhorst et al. [US Patent No 6,889,379], in view of MacFarlane et al. [US Patent Application No 2001/0042081].

6. As per claim 21, Lindhorst discloses the invention as claimed including a method for controlling content of a Hyper Text Transfer Protocol (HTTP) header [i.e. authoring of text and more particularly to techniques for automatically generating HTML script] [col 1, lines 19-22; and col 19, lines 16-27], comprising:

creating HTML or XML content by a developer [i.e. creating a new page with new methods and properties] [col 20, lines 15-22];

inserting information into the content by the developer [i.e. the editor may step the developer through each method and property of the new object to allow the developer to modify the properties and methods as they are incorporated into the object of the new page] [col 20, lines 22-45], said inserted information having a set of associated identifiers [i.e. meta name or meta HTTP-EQUIV] [col 20, lines 32-38; and col 22, lines 11-21].

Lindhorst does not specifically disclose

searching the content for the set of associated identifiers, and selecting header information corresponding to a subset of the set of associated identifiers, the subset selected based on a detected network condition; and

generating a HTTP header for the content, the generated HTTP header including the selected header information.

Doyle discloses

searching the content for the set of associated identifiers [i.e. obtain meta tag, name, HTTP-EQUIV attributes] [Figures 8B-8E; and col 8, lines 42-col 9, lines 28], and selecting header information corresponding to a subset of the set of associated identifiers, the subset selected based on a detected network condition [i.e. the cost metric information for load balance] [Figure 8B; Abstract; col 2, lines 14-23; and col 8, lines 19-41]; and

generating a HTTP header for the content, the generated HTTP header including the selected header information [i.e. response header] [815, Figure 8A; col 8, lines 19-41].

It would have been obvious to a person skill in the art at the time the invention was made to combine the teaching of Linhorst and Doyle because the teaching of Doyle on providing load balancing information would enable a more efficiently routing requests for dynamic content generation [Doyle, col 1, lines 8-15; and col 2, lines 17-20].

7. As per claim 3, Lindhorst discloses wherein the HTML or XML content is created at a web server [701, Figure 11; col 19, lines 16-27; and col 24, lines 1-9].

8. As per claim 4, Lindhorst discloses the content comprises of at least one web page [col 7, lines 65-67].

9. As per claim 6, Lindhorst discloses wherein the identifiers comprise at least one of a Meta tag, a label, a tag and a command [i.e. meta name or meta HTTP-EQUIV] [col 20, lines 32-38; and col 22, lines 11-21].

10. As per claim 7, Lindhorst does not specifically disclose performing the searching and generating are to be performed at a network node, the network node being at a different location than where the creating and inserting are performed. Doyle discloses performing the searching and generating are to be performed at a network node, the network node being at a different location than where the creating and inserting are performed [Figure 1; Abstract; col 1, lines 37-col 2, lines 6; and col 3, lines 32-44]. It would have been obvious to a person skill in the art at the time the invention was made to combine the teaching of Linhorst and Doyle because the teaching of Doyle would enable a more efficiently routing requests for dynamic content generation [Doyle, col 1, lines 8-15; and col 2, lines 17-20].

11. As per claims 24-28, Doyle discloses wherein the detected network condition includes network traffic, load balancing, network statistics, quality of service, and a service level agreement [i.e. load, load balancing, quality of service, network policy information] [Abstract; and col 1, lines 8-29].

12. As per claim 22, it is apparatus claimed of claim 21, it is rejected for similar reasons as stated above in claim 21.

13. As per claim 11, it is rejected for similar reasons as stated above in claim 3.

Art Unit: 2154

14. As per claim 12, Lindhorst does not specifically disclose Internet cache control information. Doyle discloses Internet cache control information [col 1, lines 65-col 2, lines 6]. It would have been obvious to a person skill in the art at the time the invention was made to combine the teaching of Linhorst and Doyle because the teaching of Doyle would enable a more efficiently routing requests for dynamic content generation [Doyle, col 1, lines 8-15; and col 2, lines 17-20].

15. As per claim 13, it is rejected for similar reasons as stated above in claim 6.

16. As per claim 14, Lindhorst discloses wherein the network comprises the Internet [col 7, lines 60-62].

17. As per claim 15, Lindhorst does not specifically disclose wherein the at least one network node comprises an Internet cache. Doyle discloses wherein the at least one network node comprises an Internet cache [i.e. cache server] [col 1, lines 65-col 2, lines 6]. It would have been obvious to a person skill in the art at the time the invention was made to combine the teaching of Lindhorst and Doyle because the teaching of Doyle would enable a more efficiently routing requests for dynamic content generation [Doyle, col 1, lines 8-15; and col 2, lines 17-20].

18. As per claim 16, it is rejected for similar reasons as stated above in claim 4.

Art Unit: 2154

19. As per claim 23, it is program product claimed of claim 21, it is rejected for similar reasons as stated above in claim 21.

20. As per claim 18, it is rejected for similar reasons as stated above in claim 4.

21. As per claim 20, it is rejected for similar reasons as stated above in claim 6.

22. Claims 8 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lindhorst et al. [US Patent No 6,889,379], in view of Doyle et al. [US Patent No 6,839,700], and further in view of Masters [US Patent No 6,374,300].

23. As per claim 8, Lindhorst and Doyle do not specifically disclose wherein the network node comprises a router. Masters discloses wherein the network node comprises a router [114, Figure 1A; Abstract; and col 3, lines 61-65]. It would have been obvious to a person skill in the art at the time the invention was made to combine the teaching of Lindhorst, Doyle and Masters because Masters' teaching of router would allow nodes to communicate with multiple destinations in a more organized manner.

24. As per claim 9, Lindhorst and Doyle do not specifically disclose performing the searching and generating by a network application at the router. Masters discloses performing the searching and generating by a network appliance at the router [col 5, lines 17-21]. It would have been

Art Unit: 2154

obvious to a person skill in the art at the time the invention was made to combine the teaching of Lindhorst, Doyle and Masters because Masters' teaching of router would allow nodes to communicate with multiple destinations in a more organized manner.

25. Applicant's arguments with respect to claims 3, 4, 6-9, 11-16, 18, 20-28 have been considered but are moot in view of the new ground(s) of rejection.

26. A shortened statutory period for response to this action is set to expire **3 (three) months and 0 (zero) days** from the mail date of this letter. Failure to respond within the period for response will result in **ABANDONMENT** of the application (see 35 U.S.C 133, M.P.E.P 710.02, 710.02(b)).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dustin Nguyen whose telephone number is (571) 272-3971. The examiner can normally be reached on flex schedule.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nathan Flynn can be reached on (571) 272-1915. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 2154

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
